Importing Web Page Data to PowerBI Desktop
By: Surendran Selvaraju

1. In the power BI, click on **Get Data** in **Home tab** and select the source from **Web**. Paste the website url to the url text box and proceed with **OK**

2. The **Navigator** will display all the tables available in the web page. The table selector can be previewed in the **Table View** box. If the table selected in good shape , then continue by clicking **Load** and if it is not in good shape, the table can be reshaped and clean by clicking **Transform Data.**

3. Once the **Transform Data** is clicked, the table will load into the **Power Query Editor**. After done with reshaping and cleaning on the data. The table will be load Power BI Desktop **Report view** by clicking **Close & Apply** in the Home tab of the ribbon.
